

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A composite material, comprising:  
a cementitious matrix; and  
cellulose fibers incorporated into the cementitious matrix, wherein the cellulose fibers comprise a blend of bleached and unbleached cellulose fibers and wherein the bleached cellulose fibers comprise less than about 50% of the total cellulose fibers incorporated into the matrix.
2. (Canceled)
3. (Original) The composite material of claim 1, wherein the bleached cellulose fibers comprise between about 5%-25% of the total cellulose fibers incorporated into the matrix.
4. (Original) The composite material of claim 1, wherein the bleached cellulose fibers have an average Kappa number of less than or equal to about 10.
5. (Original) The composite material of claim 1, wherein the bleached cellulose fibers comprise fibers from species selected from the group consisting of Douglas fir, hemlock, spruce, southern yellow pines, kenaf and redwood.

6. (Original) The composite material of claim 1,  
wherein the bleached cellulose fibers comprise fibers of *P.*  
*Radiata* pine.

7. (Original) The composite material of claim 1,  
wherein the unbleached cellulose fibers comprise fibers  
from species selected from the group consisting of Douglass  
fir, hemlock, white fir, spruce, southern pine, kenaf and  
redwood.

8. (Original) The composite material of claim 1,  
wherein the bleached and unbleached cellulose fibers  
comprise about 0.5%-20% by weight of the composite  
material.

9. (Original) The composite material of claim 1,  
wherein the bleached and unbleached cellulose fibers  
comprise cellulose fibers having an average fiber length of  
between about 1 mm to 3.5 mm.

10. (Original) The composite material of claim 1,  
wherein the modulus of rupture (MOR) of the composite  
material is substantially equal to or greater than the MOR  
of an equivalent composite material reinforced with  
unbleached, premium grade cellulose fibers.

11. (Original) The composite material of claim 1,  
wherein the toughness energy of the composite material is  
substantially equal to or greater than the toughness energy

of an equivalent composite material reinforced with unbleached, premium grade cellulose fibers.

12.-17. (Canceled)

18. (Original) A composite building material, comprising:

a cementitious matrix; and

a blend of cellulose fibers comprising bleached and unbleached cellulose fibers, wherein the blend of cellulose fibers is selected to provide the building material with pre-determined flexibility and strength.

19. (Original) The building material of claim 18, wherein the blend of cellulose fibers is selected to provide the building material with flexibility and strength that are substantially equal or superior to the flexibility and tensile strength of an equivalent building material reinforced with only premium-grade cellulose fibers.

20. (Original) The building material of claim 18, wherein the blend of cellulose fibers is selected provide the building material with flexibility and strength that are substantially equal or superior to the flexibility and tensile strength of an equivalent building material reinforced with only bleached cellulose fibers.

21. (Original) The building material of claim 18,  
wherein the blend of cellulose fibers comprises less than  
about 50% bleached cellulose fibers.

22. (Original) The building material of claim 18,  
wherein the blend of cellulose fibers does not include  
premium grade cellulose fibers.

23. (Original) The building material of claim 21,  
wherein the blend of cellulose fibers comprises about 5%-  
25% bleached cellulose fibers.

24. (Original) The building material of claim 18,  
wherein the bleached cellulose fibers have a Kappa number  
of less than about 10.

25. (Original) A composite material, comprising:  
a cementitious matrix;  
a first portion of cellulose fibers having a Kappa  
number of less than or equal to about 10; and  
a second portion of standard grade cellulose fibers  
having a Kappa number of greater than about 10.

26. (Original) The composite material of claim 25,  
wherein the first portion of cellulose fibers comprises  
premium grade cellulose fibers.

7

27. (Original) The composite material of claim 25,  
wherein the first portion of the cellulose fibers comprises  
less than about 50% by weight of the total amount of the  
two portions of cellulose fibers combined.
